

AMY MELISSA BENNETT

Product & Systems Designer | Interaction Design, Systems Thinking, and AI-Integrated Workflows

[Portfolio](#) | [LinkedIn](#) | [GitHub](#) | [Email](#)

SUMMARY

I design systems that translate complexity into clear, usable digital experiences across web, product, and AI-integrated environments.

I explore how interaction, structure, and behavioral patterns shape the way people move through digital spaces—where friction emerges, how continuity is maintained, and how systems can be refined to feel more intuitive and human.

My work combines systems thinking, interaction design, and visual communication to create cohesive experiences grounded in clarity, usability, and real-world application.

CORE SKILLS

Systems & Interaction Design

Systems Thinking • Information Architecture • Interaction Design • UX Design • Interface Design (UI) • Design Systems • Behavioral Workflows • Prototyping & Wireframing

Implementation & Digital Environments

Front-End Implementation (HTML/CSS) • Responsive Web Design • WordPress CMS • Developer Handoff • Design Specifications • Accessibility (WCAG)

Visual Communication & Creative Systems

Visual Design • Layout & Hierarchy • Typography • Adobe Creative Suite (Photoshop, Illustrator, Premiere Pro) • Motion & Multimedia Workflows

AI-Integrated & Collaborative Workflows

AI-Assisted Workflows • Multimodal Evaluation & Annotation • Cross-Functional Collaboration • Remote & Asynchronous Workflows

EXPERIENCE

Digital Systems Specialist (Freelance) — 2021–Present

- Designed and refined digital experiences across web, interaction, and AI-assisted workflows
 - Translated complex requirements into structured user flows and scalable interaction systems
 - Created wireframes, prototypes, and high-fidelity designs supporting clarity, continuity, and usability
 - Built and maintained CMS-based websites with responsive layouts and structured content systems
 - Collaborated with stakeholders to shape accessible, user-centered design decisions
 - Identified and resolved UX, navigation, and content-structure friction across platforms
-

AI Systems Evaluator / Multimodal Annotation Specialist — Handshake AI (Project Hedgehog) & Outlier AI (Project Aether)

Jan 2026–Present | Remote

- Evaluate multimodal outputs for usability, clarity, interaction quality, and instruction adherence
 - Compare outputs head-to-head to assess structure, coherence, and interaction consistency
 - Apply structured evaluation frameworks to identify usability issues, inconsistencies, and edge cases
 - Provide written rationale supporting evaluation decisions and iterative refinement workflows
 - Maintain high accuracy and consistency across asynchronous, high-volume AI evaluation workflows
-

Multimedia Designer — SciVite (WSU Vancouver)

Jan 2025–May 2025 | Hybrid, Vancouver, WA

SciVite: a virtual interactive tour experience for WSU Vancouver's Life Sciences Building, commissioned by the university for recruitment and promotions.

- Developed UI assets and visual systems supporting an interactive institutional tour experience
 - Collaborated on wireframes, prototypes, and interface layouts supporting navigation clarity
 - Optimized and processed 35+ images for accessibility, performance, and visual consistency
 - Applied UX/UI principles to support intuitive navigation and cohesive interaction design
-

Audio Designer — Connecting Consciousness (PDX Winter Lights Festival)

2024–2025

- Created audio experiences through iterative, systems-based creative workflows
 - Evaluated audio output for clarity, cohesion, and experiential consistency
 - Managed iterative development and refinement across multimedia content systems
-

Web Developer/Designer — Clark College

2020 & 2021

- Built and maintained CMS-based websites and structured content platforms

- Managed publishing workflows, content migration, and digital updates
 - Maintained documentation and consistency across institutional digital properties
-

FEATURED SYSTEMS WORK

Designing Context-Aware Behavioral Architecture for Stateless AI Systems

Independent Systems Design & Research Project

- Developing modular AI interaction frameworks exploring continuity, behavioral architecture, and context-aware workflow systems across adaptive conversational environments
 - Designing specialized interaction environments supporting cognitive, emotional, and operational contexts through structured prompting and continuity modeling
 - Exploring how pacing, hierarchy, memory reconstruction, and interaction design shape long-term human–AI collaboration
-

EDUCATION

B.A. Digital Technology & Culture — Washington State University (2025)

A.A.T. Digital Media Arts — Clark College (2022)

A.A.T. Web Development — Clark College (2021)
